DISCLAIMER

1) The historical NI 43 101 resource estimate is based on a cut off of 30 g/tAg for open pit and 80 g/t Ag for underground resource classification completed by Micon International Ltd. for Silvermex Resources Ltd ("Silvermex") on November 5, 2008. The historical resource is based on 4,884 meters of drilling in 30 core drill holes completed by Silvermex and previous operators over a strike length of 600 meters and vertical extent of 250 meters. A qualified person has not done sufficient work to verify and to classify the historical estimate as current mineral resources and the Company is not treating the historical estimate as current mineral resources. Further work must be carried out to verify all historic information before a resource estimate is possible, and there can be no assurance that when established, that any such resource would be economically recoverable. The NI 43-101 was filed on SEDAR on November 21, 2008 under the name of Silver Ore Mining Corporation the predecessor of Silvermex. Ag equivalent ounces (eq oz) is calculated from gpt data. AgEq g/t = Ag g/t + (Pb grade x (Pb price per lb/Ag price per oz) x 0.0685714 lbs per Troy Ounce x 10000 g per %) + (Zn grade x (Zn price per lb/Ag price per oz) x 0.0685714 lbs per Troy Ounce x 10000 g per %). Ag price per oz (US\$16.50), Pb price per lb (US\$0.95) and Zn price per lb (US\$1.15)
